DIY Tennis Ball Therapy for Pain Management

Tennis ball self-massage can be applied to any part of the body.

DIY muscle release techniques are very effective for rejuvenating and regenerating muscles affected by soft tissue imbalances. They can rehabilitate and restore the soft tissue structures to a healthy condition; preparing the muscles for movement and aiding recovery.

By using a few tennis balls and a sock, and using the correct simple moves it is possible to reach the deepest layers of muscle and connective tissue and release adhesions so muscles are able to fully stretch and contract. This could relieve discomfort, pain, and increase blood and lymph circulation. With the use of a pair of tennis balls it is possible to get relief.

The benefits of Tennis Ball Massage Therapy

DIY muscle release may:

- increase joint range of motion
- help muscle performance
- decrease fatigue after exercise
- decrease soreness after exercise

DIY muscle release is best after a workout; it can be performed whenever you can fit in throughout the day. It not occupy too much time and can fitted into a busy schedule. Just like stretching, the best results are seen after consistent practice.

Releasing trigger points can be painful and ache afterwards. The pain should be a satisfying type of pain, similar to a deep tissue massage.

Here are some rules to follow while practicing DIY tennis ball therapy:

1. Warm the muscles area beforehand.
 2. When the point of tension is found hold the ball in place and keep sustained pressure the discomfort should be satisfying, not painful.
 3. Breathe deeply, to oxygenate blood.
 4. Stop if it does not feel right. This is always a good rule when exercising.
 5. Stretch the muscle afterwards. This is always a good rule following massage

Therapi Tylino

Sole of the Foot (plantar fascia)

Pain in the bottom of the foot causes can be Plantar Fasciitis.

This is inflammation or irritation of the plantar fascia, the band of tissue which runs along the sole of your foot. Tennis ball therapy can help break up adhesions, reducing pain.

1. While standing next to a wall or chair for stability position the tennis ball under your arch of your foot.
2. Lean forward, putting weight on your affected side. Slowly roll the ball back and forth along the arch of your foot, from the heel to the toes and back to the heel
3. Continue for 5 cycles.
4. Repeat on other foot if necessary.
